

ICT158

Introduction to  
Information  
Systems

## Topic 9

# Fitting IS to the organisation

COMMONWEALTH OF AUSTRALIA

Copyright Regulations 1969

WARNING

This material has been reproduced and communicated to you by or on behalf of Murdoch University pursuant to Part VB of the Copyright Act 1968 (the Act).

The material in this communication may be subject to copyright under the Act.

Any further reproduction or communication of this material by you may be the subject of copyright protection under the Act.

Do not remove this notice.

# Learning objectives

After completing this topic you should be able to:

- **Explain** how information systems can impact an organisation and **cause change**
- **Describe** two different **change strategies** – *continuous improvement* and *business process re engineering*
- **Describe** the four major **responsibilities of an IS department** within an organisation
- **Evaluate** the **roles** of different IT positions within an organisation
- **Discuss** the importance of **stakeholders** and **users** of an information system
- **Define usability**
- **Discuss usability** in relation to **globalisation/localisation challenges**.

# Key Concepts

- Continuous improvement (CI)
- Business process reengineering (BPR)
- People and information systems
- Usability
- Globalisation/localisation

# Readings

- Kroenke, D, Bunker, D, & Wilson, D. (2010). Experiencing MIS: Pearson Australia. Ch 11 [available through MyUnitreadings]

**Murdoch**  
UNIVERSITY

Topic 8 looked at how information systems are acquired, often either developed or procured.

This topic looks at *why* IS is acquired, and *who* and *how* decisions about *which* IS are made.

# Overview

Organisational change – improvement  
through CI or BPR

The role of the IS department (based on Kroenke et al  
2010 ch 11)

IS positions

Stakeholders & end users

Usability

Globalisation/localisation

**Murdoch**  
UNIVERSITY

# 9.1 Organisational change

## 9.1.1 Culture & change

## 9.1.2 Change adjustments - improvement through

- CI
- BPR

# Organisational change

In topic 3 we said **organisational culture** – *the shared understandings, values, and assumptions in an organisation* - influences information systems within the organisation

Often a new IS represents a process of

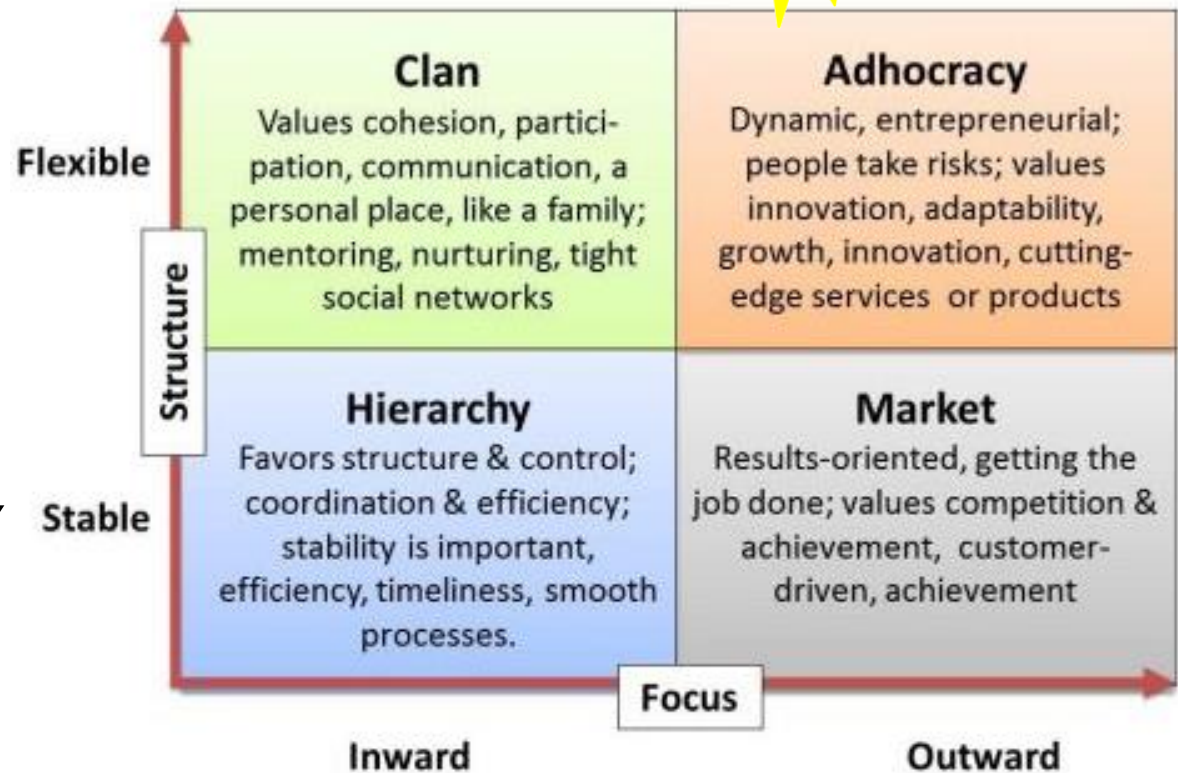

*organisational change*

How the organisation reacts to this change is impacted by its culture

# Cameron and Quinn's classification

Major dimensions reflect an *inward* or an *outward* focus, and *flexibility* versus *stability*

From Topic 3

SOURCE: ADAPTED FROM K. S. CAMERON, R. E. QUINN, J. DEGRAFF, AND A. V. THAKOR, *COMPETING VALUES LEADERSHIP* (NORTHAMPTON, MA: EDWARD ELGAR, 2006), P. 32.

Source: <http://leadstrategic.com/2013/04/29/new-wineskins/>

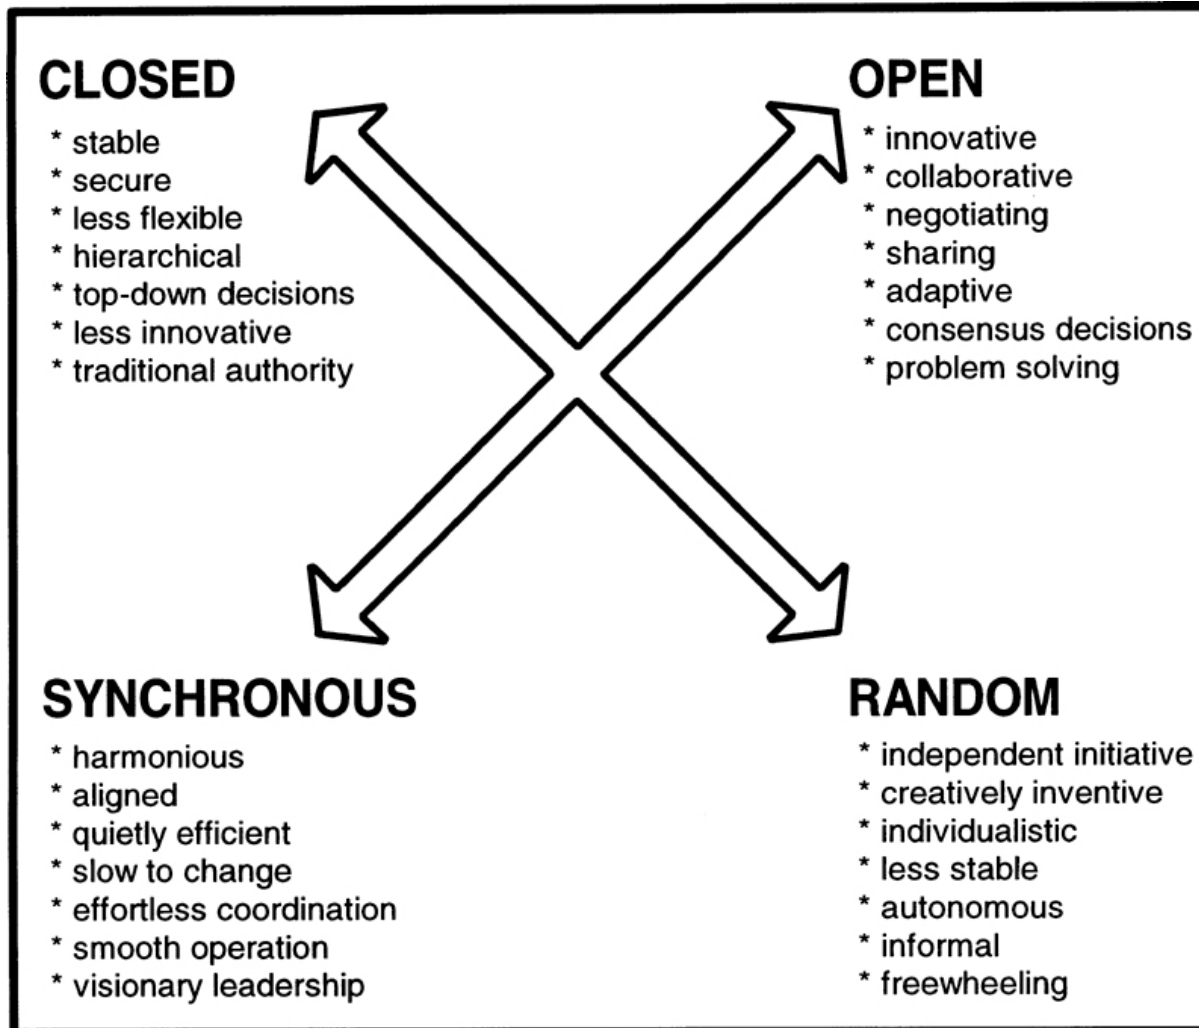

THAKOR, *COMPETING VALUES LEADERSHIP*

(NORTHAMPTON, MA: EDWARD ELGAR, 2006), P. 32.

# Constantine's classification

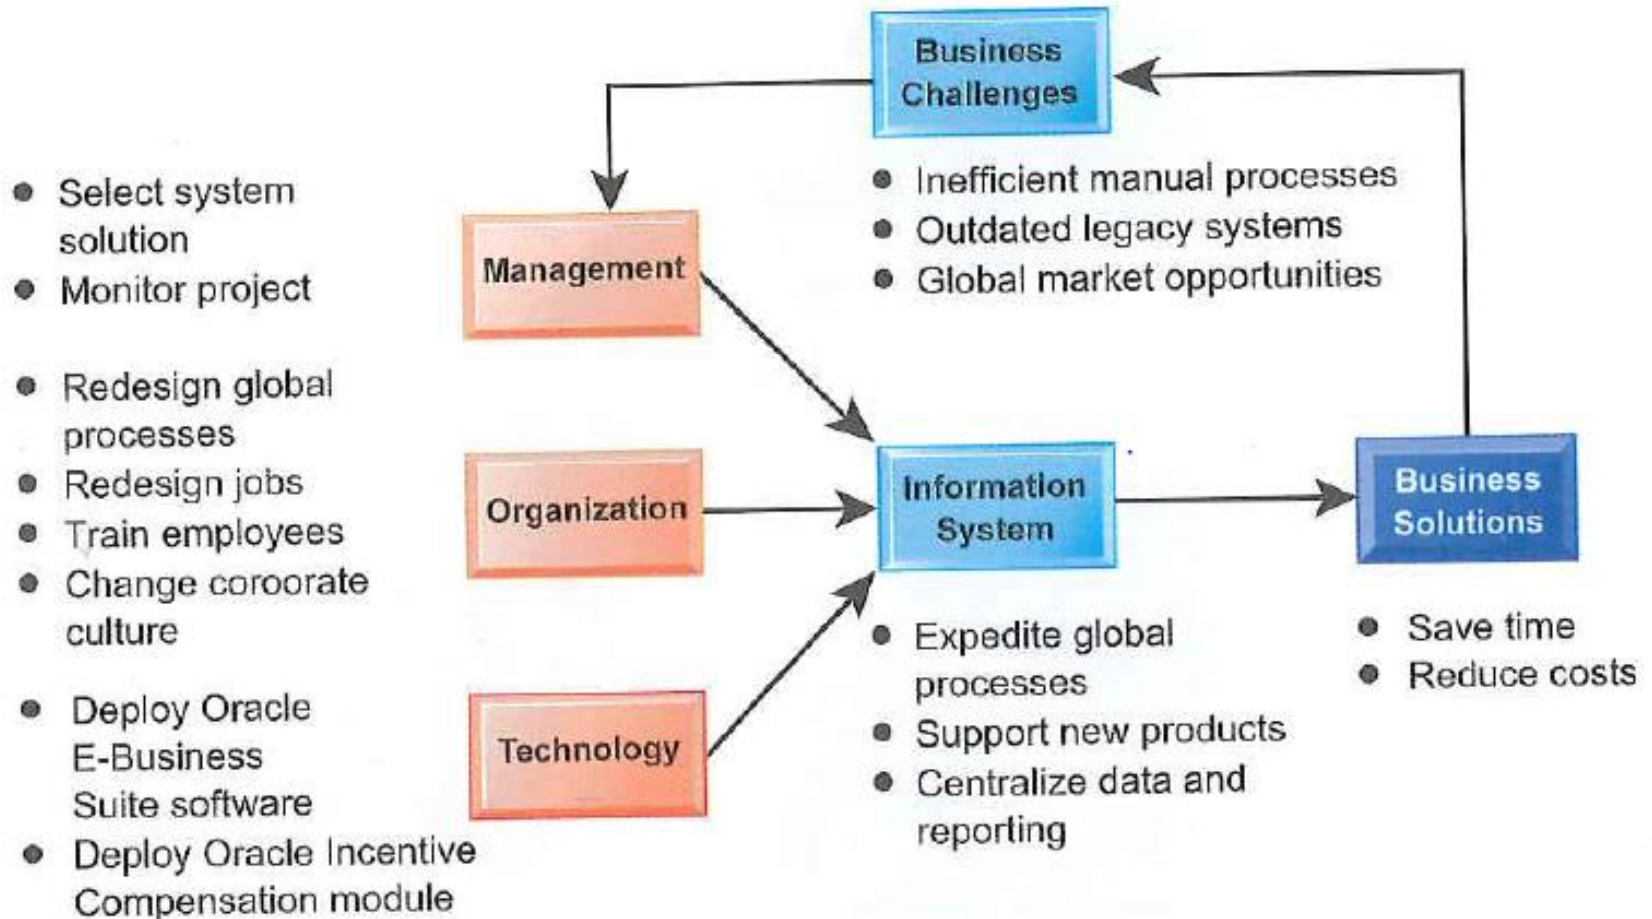

**Murdoch**  
UNIVERSITY

From Topic 3

# Identifying a business challenge

# Change adjustments

## **Continuous Improvement (CI)**

*Constantly* seeking ways to improve business processes

## **Business Process Reengineering (BPR)**

*Radical* redesign of business processes, organisational structure, and information systems of the organisation

## Continuous Improvement

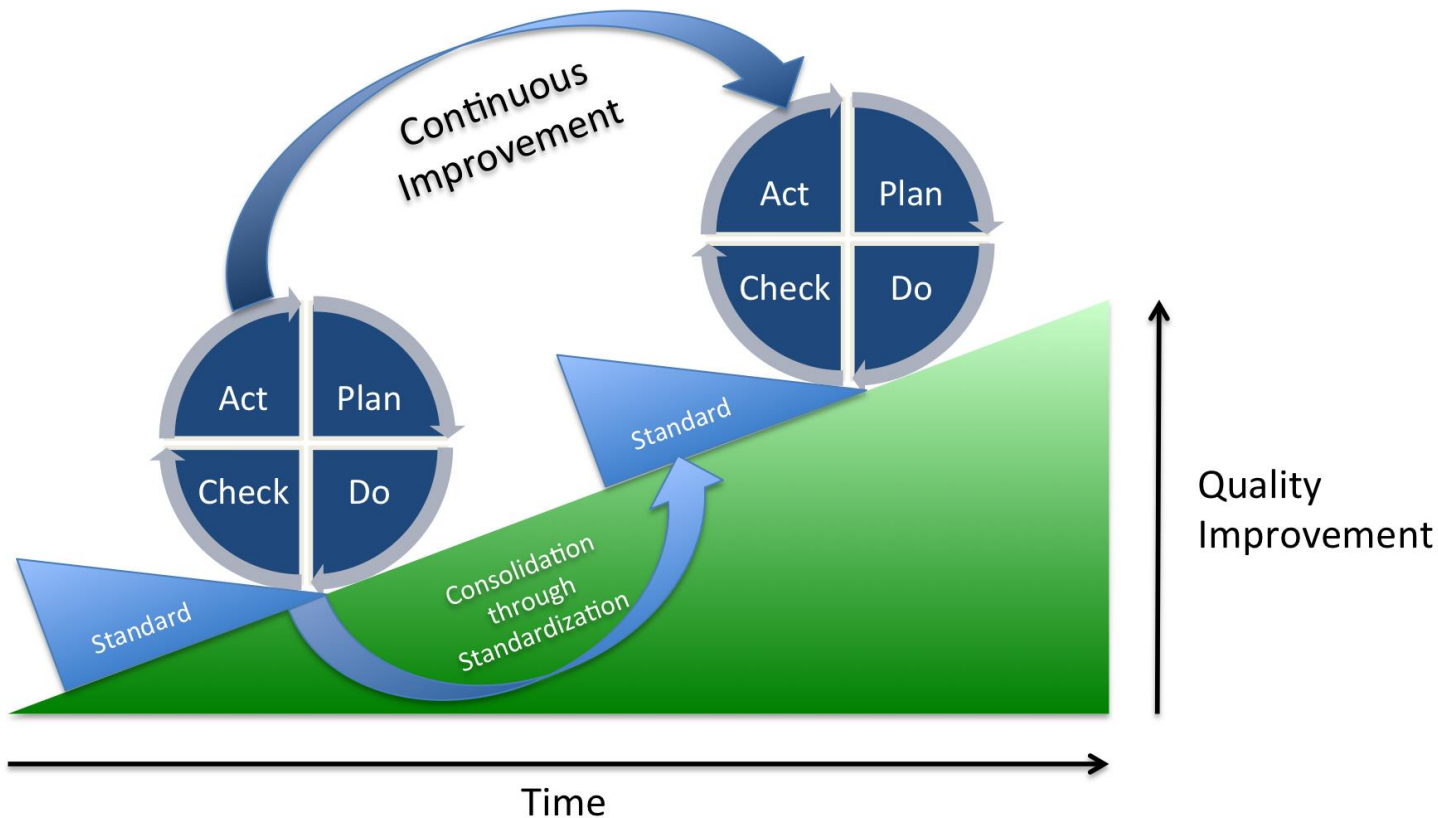

- ✓ Focused on Problem-Solving
- ✓ Evolutionary
- ✓ Change within a stable system
- ✓ Gradual & small improvements
- ✓ Questioning how we can best do something.
- ✓ May be internal process focused or customer focused
- ✓ Done by those doing the work at every level
- ✓ Process owners experiment and improve
- ✓ How to improve work within the current structure

It's important to continuously improve information systems as business grows or declines

As an information system communicates improved information and provides the appropriate tools and content, it supports changing business strategies throughout the organisation

This is *iterative improvement*

# Cycle of continuous improvement

Source: [http://upload.wikimedia.org/wikipedia/commons/a/a8/PDCA\\_Process.png](http://upload.wikimedia.org/wikipedia/commons/a/a8/PDCA_Process.png)

# BPR

Business Process Reengineering is different from other approaches to organisation development, especially Continuous Improvement

Its aim is for *fundamental* and *radical* change rather than iterative improvement

# BPR

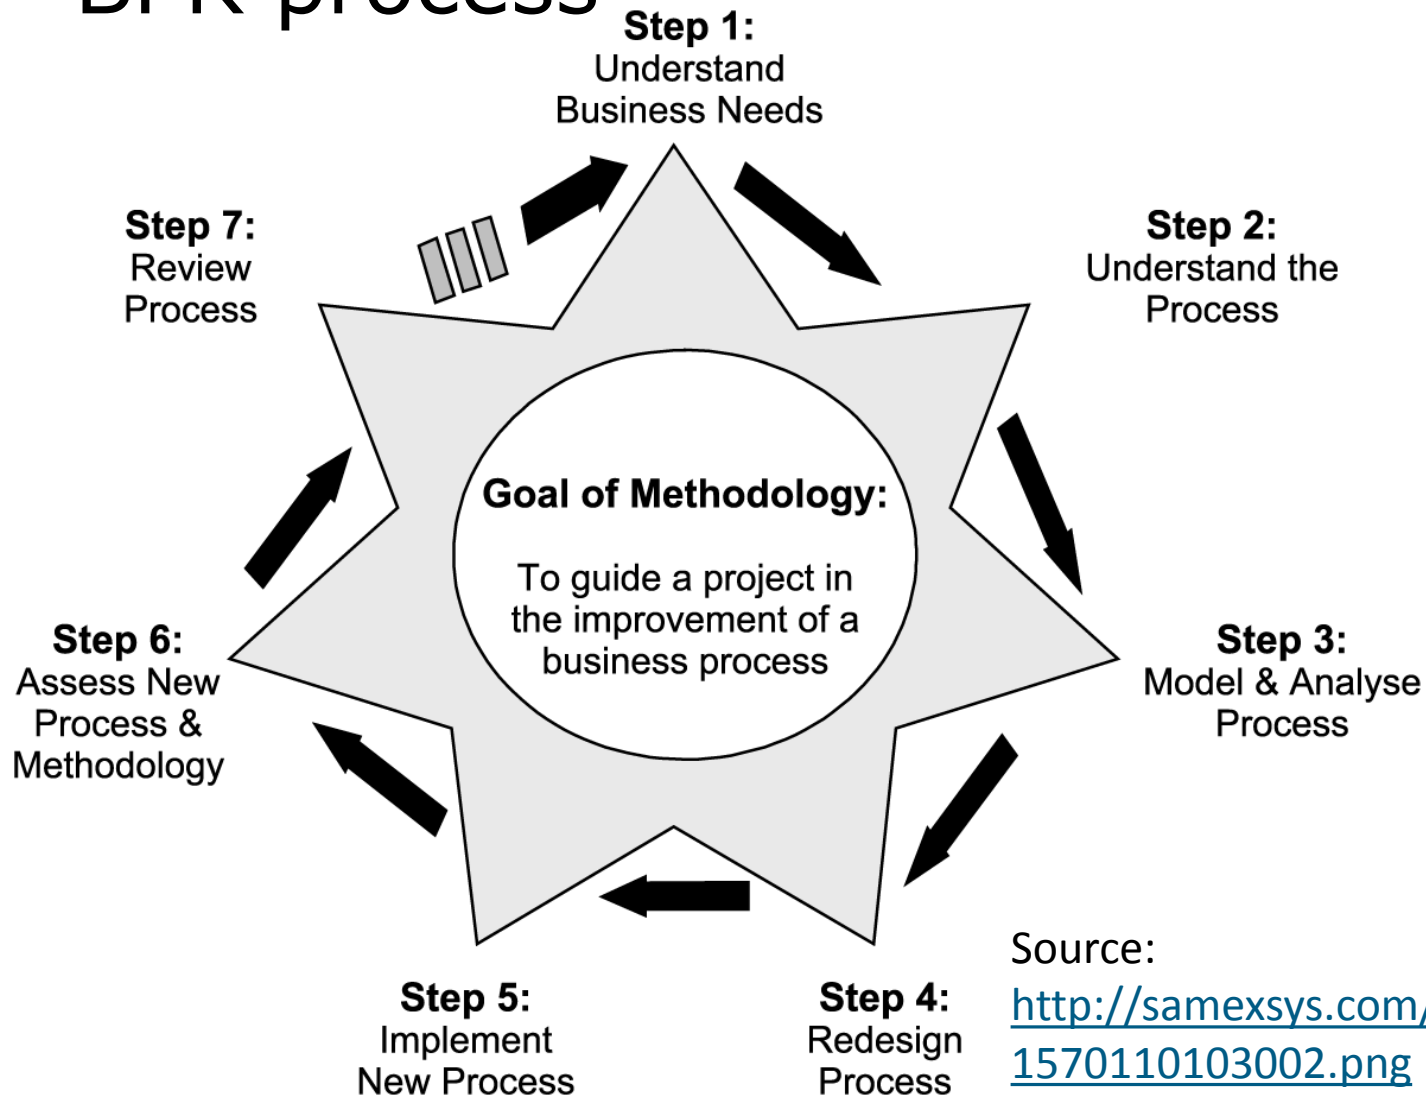

Focuses on the analysis and design of workflows and business processes within an organisation

Starts with high-level assessment of mission, strategic goals and customer needs

Only after the organisation rethinks what it should be doing, does it go on to decide how best to do it

# BPR process

Source:

<http://samexsys.com/en/images/services/1570110103002.png>

# Impact of BPR

When properly implemented BPR produces  
*radical gains in efficiency and productivity*

It may even change the way the business is  
run

In some instances, it drives a paradigm shift  
that transforms the nature of the industry

Amazon is an example of a radical rethinking  
of the way a book can be bought or sold

# Change adjustments

**Murdoch**  
UNIVERSITY

<b>Reengineering</b>	<b>Continuous Improvement</b>
Firm strong action to remedy serious problem	Routine actions for minor improvements
Driven from the top down	Worker drive
Very broad in scope	Narrow in scope
Initiated by external factors	Initiated by workers close to the area
IS play a very large part in formulating a solution	IS provide data to guide the improvement

# Recap

*Continuous improvement and BPR are*

---

*strategies for monitoring and improving*

---

*business processes within the organisation.*

---

*CI may be considered evolutionary, while BPR*

---

*can be revolutionary.*

---

# 9.2 The role of the IS department

## 9.2.1 Responsibilities of the IT/IS department

- Plan for IS and IT *infrastructure*
  - *Business alignment*
- Develop and adapt IS and IT *infrastructure*
- Maintain IS and operate and manage *infrastructure*
- Protect *infrastructure* and *data*

# Role of the IS department

## Why do you need to know?

- To be an effective consumer of the IS department's resources
- To be a better manager by knowing the functions of the IS department
- To ensure the functions are performed

# Responsibilities of the IS department

These are the critical areas of influence:

- **Plan** for IS and IT *infrastructure*
- **Develop** and adapt IS and IT *infrastructure*
- **Maintain** IS and **operate** and **manage** *infrastructure*
- **Protect** *infrastructure* and *data*

# Plan for IS and IT infrastructure

Information systems exist to further the organisation's competitive strategy

One perspective is that there are no 'IS projects' – all projects involving IS facilitate some business goal

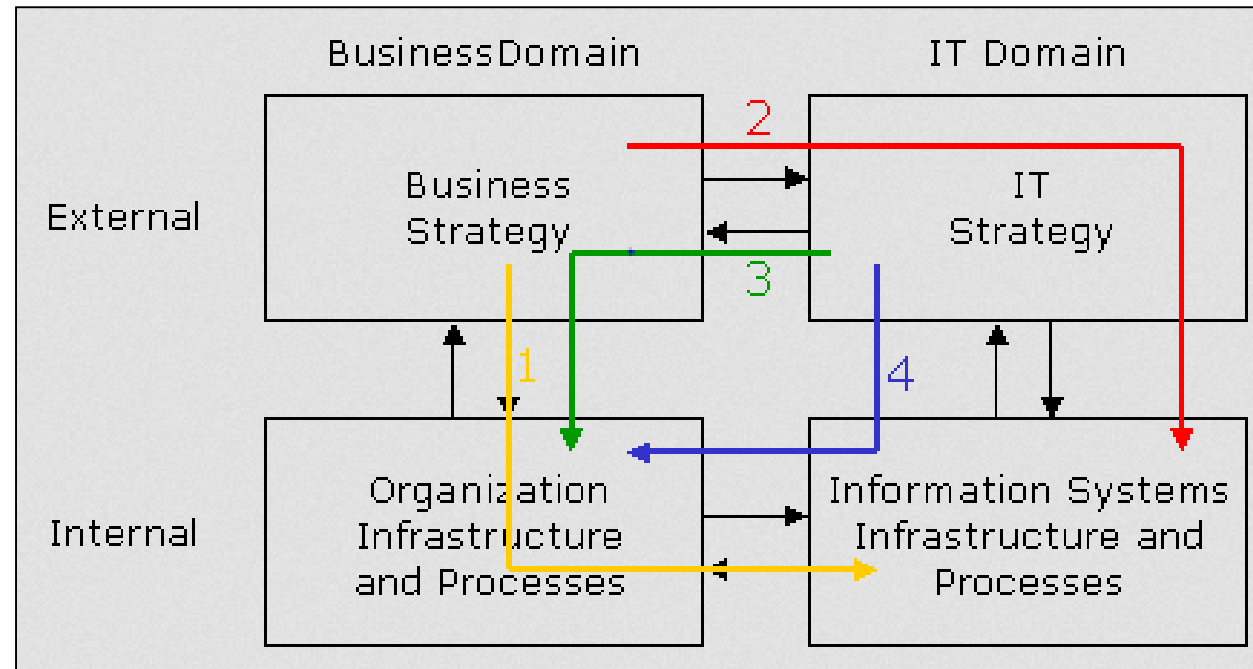

The IS department aligns all of its activities with the organisation's primary goals and objectives

As new technology emerges, the IS department assesses it and determines if it can advance the organisations goals

As the business changes, the IS department is responsible for adapting infrastructure and systems to the new goals

# Business – IS alignment

Business-IS *alignment* involves optimising communication between executives who make the business decisions and IS managers who oversee the technical operations

Source:

[http://www.valuebasedmanagement.net/methods\\_venkatraman\\_strategic\\_alignment.html](http://www.valuebasedmanagement.net/methods_venkatraman_strategic_alignment.html)

# Develop and adapt IS and IT infrastructure

Murdoch  
UNIVERSITY

In addition to IS development, the IS department is responsible for creating and adapting *IT infrastructure* (eg networks, servers, repositories)

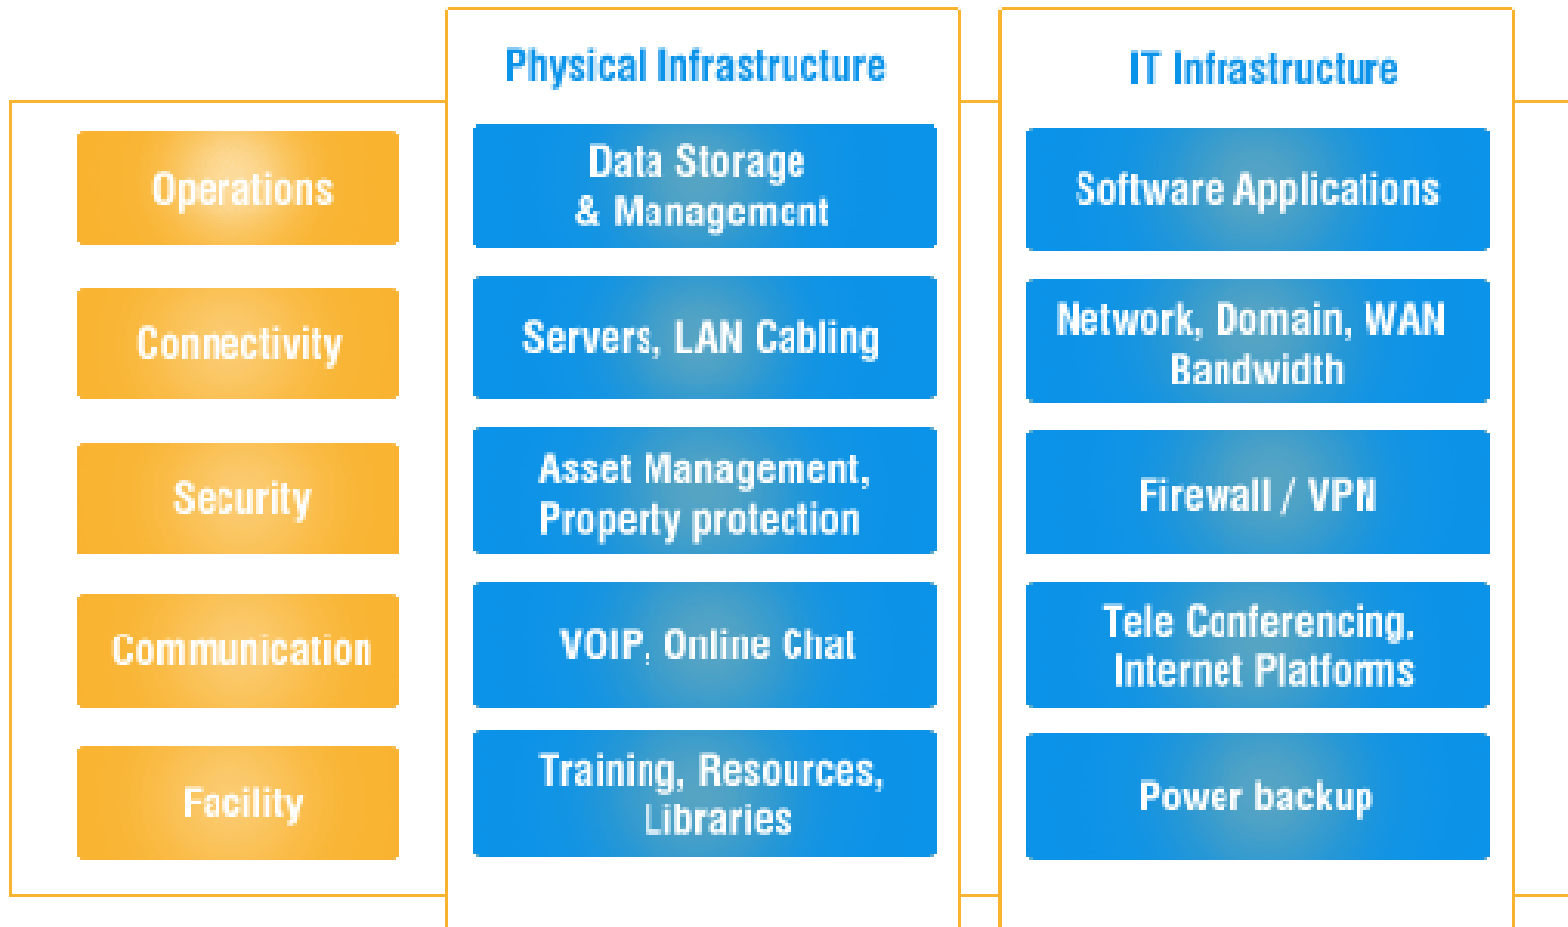

The IS department also creates *systems infrastructure* (eg email systems, wikis and any other technology the organisation needs)

The IS department will specify the *standards* it will support (in hardware, software and configurations)

# Develop and adapt IS and IT infrastructure

**Murdoch**  
UNIVERSITY

Source:

<http://www.strategicservices.com/in/images/graph-infrastructure.gif>

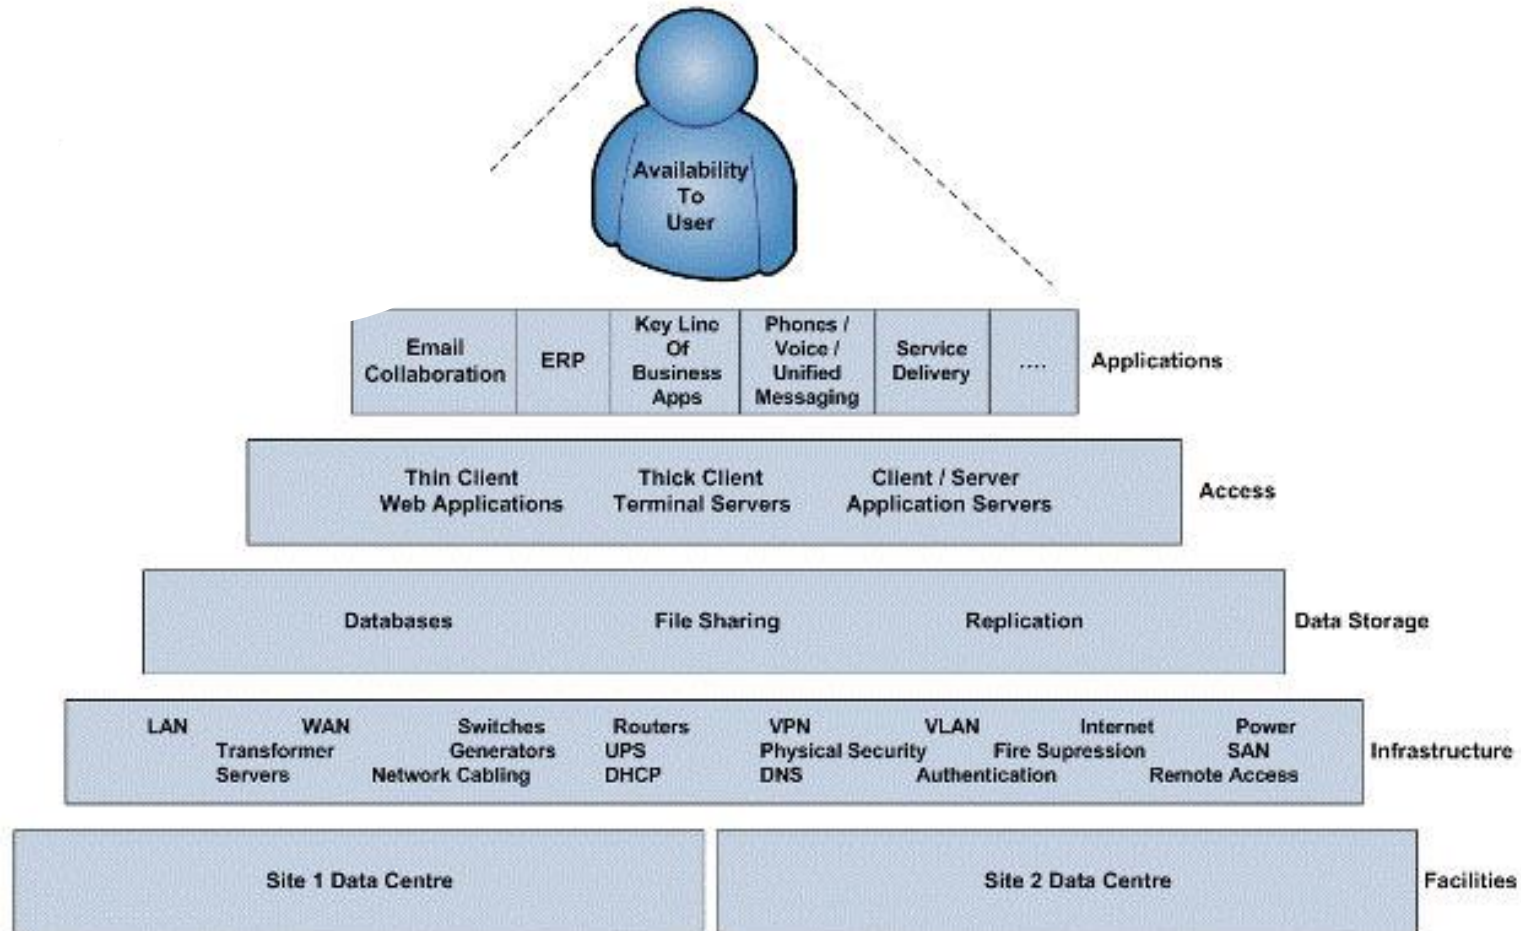

# Maintain IS and operate and manage infrastructure

Infrastructure must be *monitored* and *managed*

Due to the high cost and serious disruption of system outages, IS personnel are particularly sensitive to possible threats to that infrastructure

# Infrastructure dependency

Source: <http://radinka.co.id/v1/images/stories/infra01.jpg>

# Protect infrastructure and data

Threats arise from three sources:

- Human error
- Malicious human activity
- Natural events & disasters

The IS department helps the organisation manage risk by

- identifying threats
- estimating cost (not just financial)
- specifying appropriate safeguards

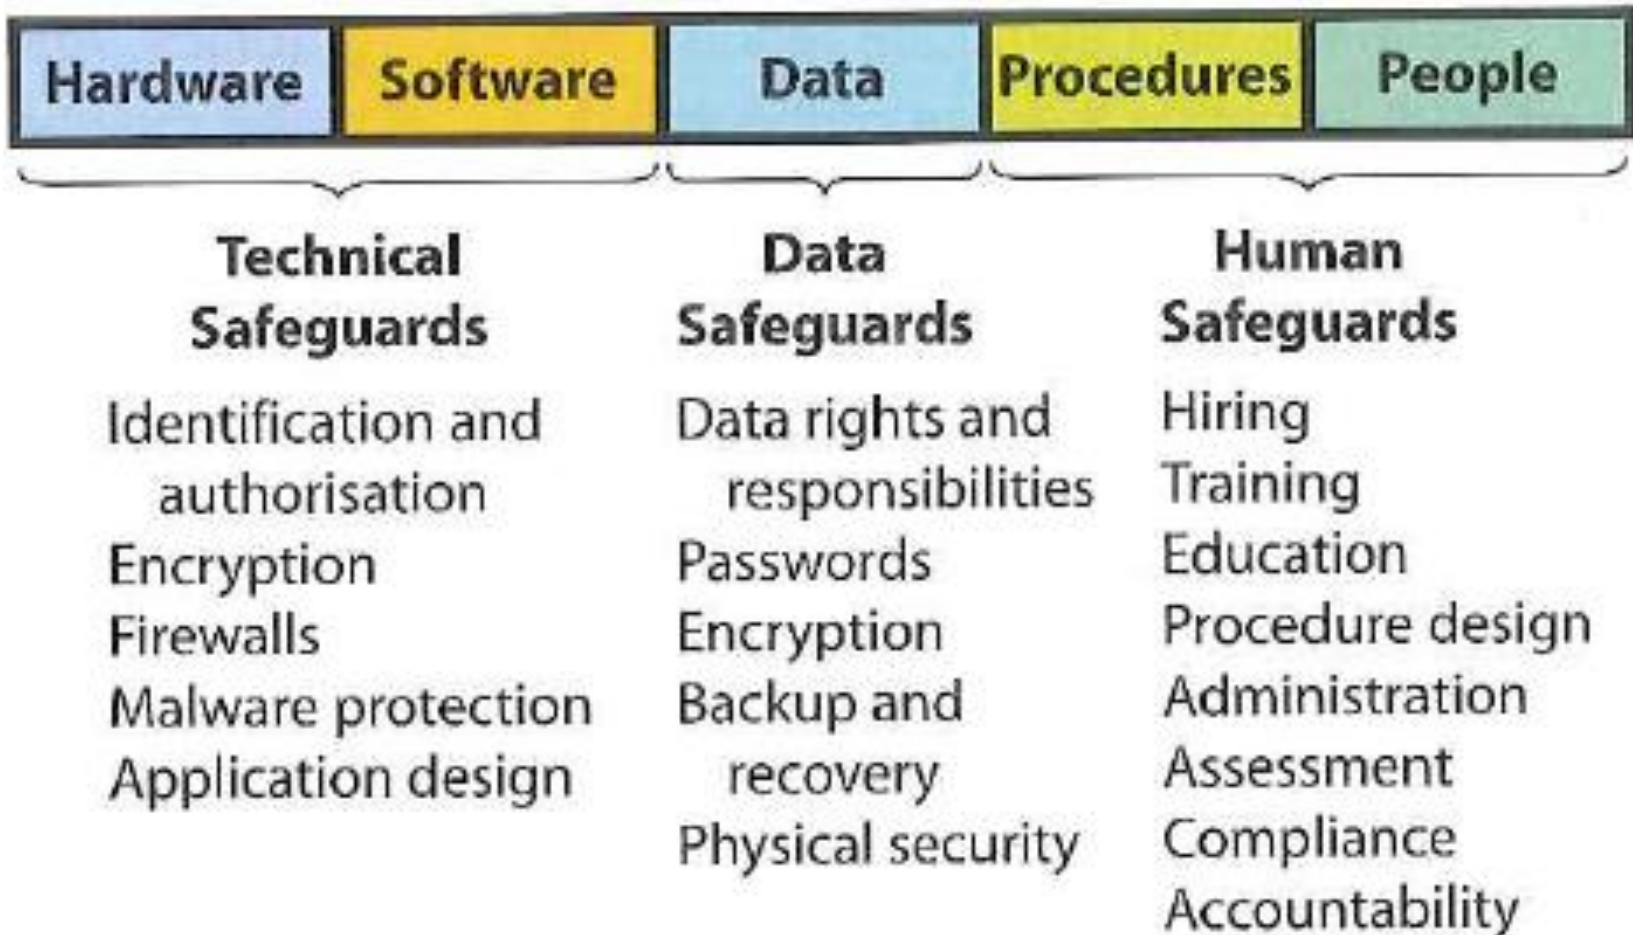

# Security threats

		Source		
		Human Error	Malicious Activity	Natural Disasters
<b>Problem</b>	<b>Unauthorised data disclosure</b>	Procedural mistakes	Pretexting Phishing Spoofing Sniffing Computer crime	Disclosure during recovery
	<b>Incorrect data modification</b>	Procedural mistakes Incorrect procedures Ineffective accounting controls System errors	Hacking Computer crime	Incorrect data recovery
	<b>Faulty service</b>	Procedural mistakes Development and installation errors	Computer crime Usurpation	Service improperly restored
	<b>Denial of service</b>	Accidents	DOS attacks	Service interruption
	<b>Loss of infrastructure</b>	Accidents	Theft Terrorist activity	Property loss

# Security safeguards

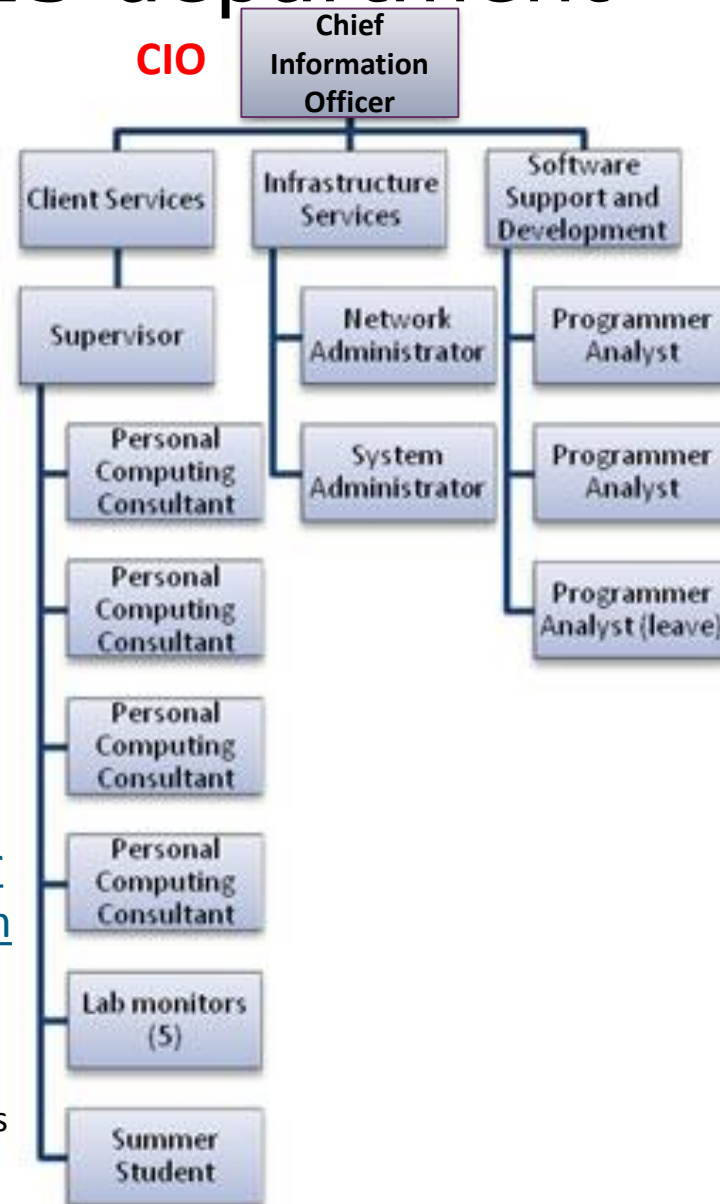

# Organising the IS department

Murdoch  
UNIVERSITY

The department may have specified personnel to manage specific responsibilities:

- Software support & development
- Infrastructure
- Client services

Source:

<http://www.mi.mun.ca/media/mi/informationcommunicationstechnologies/images/ict-structure.jpg>

# Recap

Murdoch  
UNIVERSITY

*The IS department plays several principal roles in an organisation:*

- *Plan for IS and IT infrastructure*
- *Develop and adapt IS and IT infrastructure*
- *Maintain IS and operate and manage infrastructure*
- *Protect infrastructure and data*

# 9.3 IS professionals

## 9.3.1 Skills

## 9.3.2 Roles

# Skills required of an IS professional

From Topic 1

➤ Strong

- analytical
- critical thinking

skills as they apply to the creation, management and use of the information associated with organisational processes

- Technical skills in the areas of the analysis, design and implementation of information technology solutions that enhance organisational performance across a wide variety of domains

# Information Systems job profiles

# Recap

Murdoch  
UNIVERSITY

*IT professionals have a number of roles within  
the IS department in an organisation.*

*Which role they take depends on the skills they  
exhibit and rely on.*

# 9.4 IS for people

## 9.4.1 Stakeholders

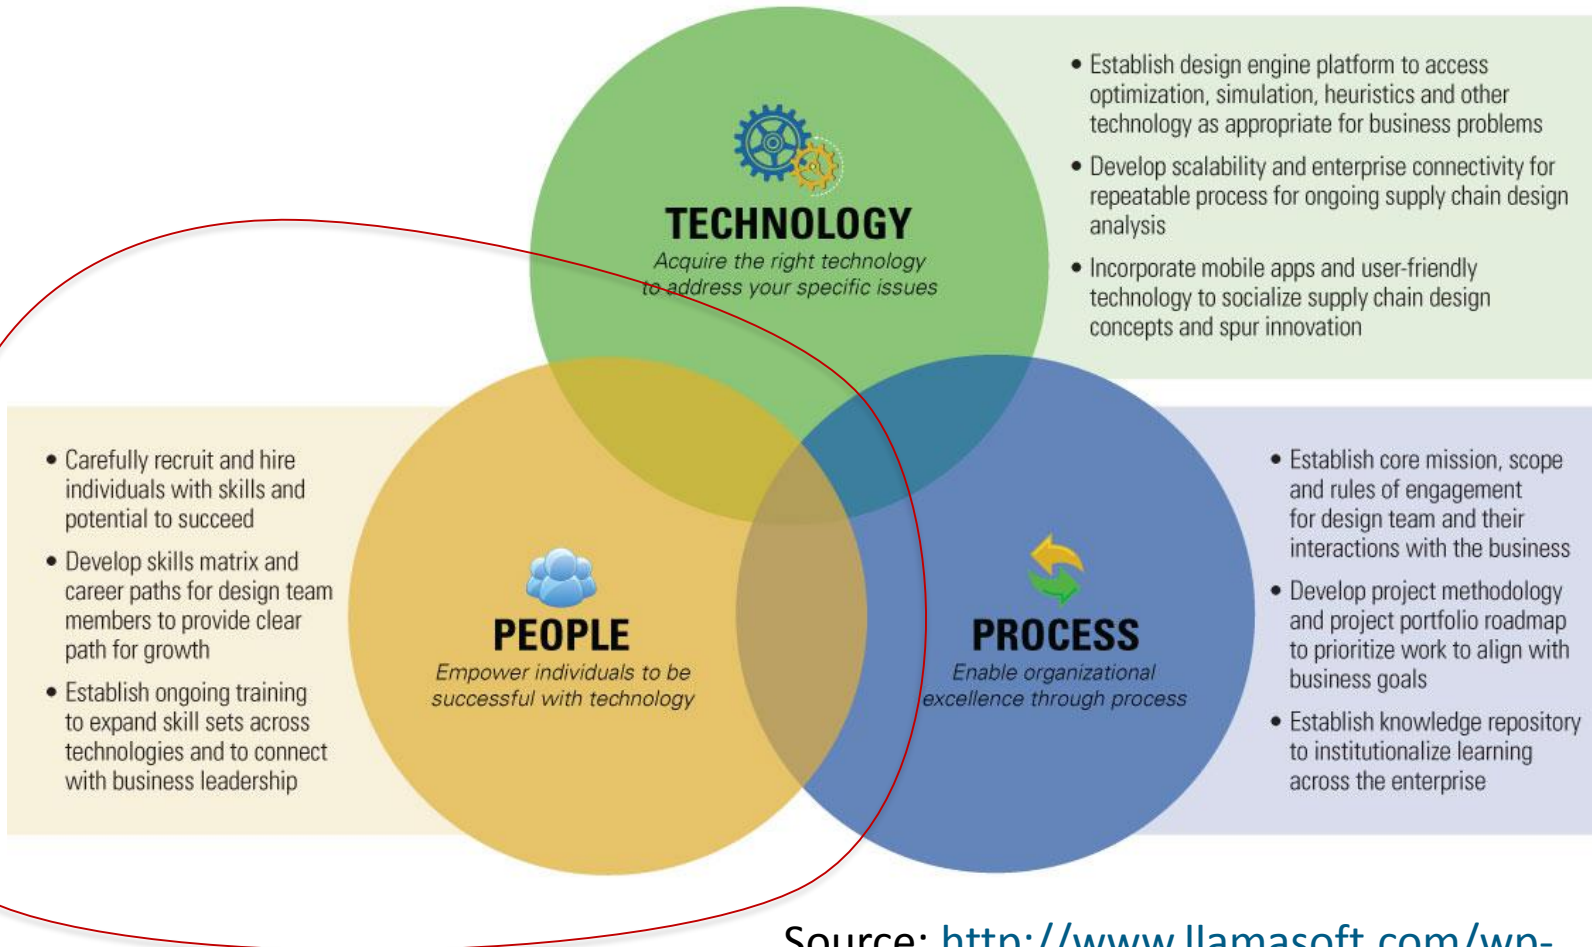

## 9.4.2 Users

- HCI
- Usability

# Information systems for *people*

**Murdoch**  
UNIVERSITY

# Stakeholders are people

The earlier in the process stakeholders can be involved, the better

- **If you want to involve stakeholders in the process** - *they should be part of every phase of the work, so that they can both contribute and take ownership.* Their knowledge of the organisation and understanding of its needs can prove invaluable in helping you to avoid mistakes in your approach and in the people you choose to involve
- **Stakeholders should be included in any assessment and pre-planning activities as well as planning and implementation** in any IS project proposed. That way, they'll understand the process and project much more clearly, and can add to them
- **If you want your process to be regarded as transparent**, stakeholder involvement from the beginning is absolutely necessary
- **If your effort involves changes that will affect people in different ways** - it's important that they be involved early so that any concerns or barriers show up early and can be addressed

Source: adapted from <http://ctb.ku.edu/en/table-of-contents/participation/encouraging-involvement/identify-stakeholders/main>

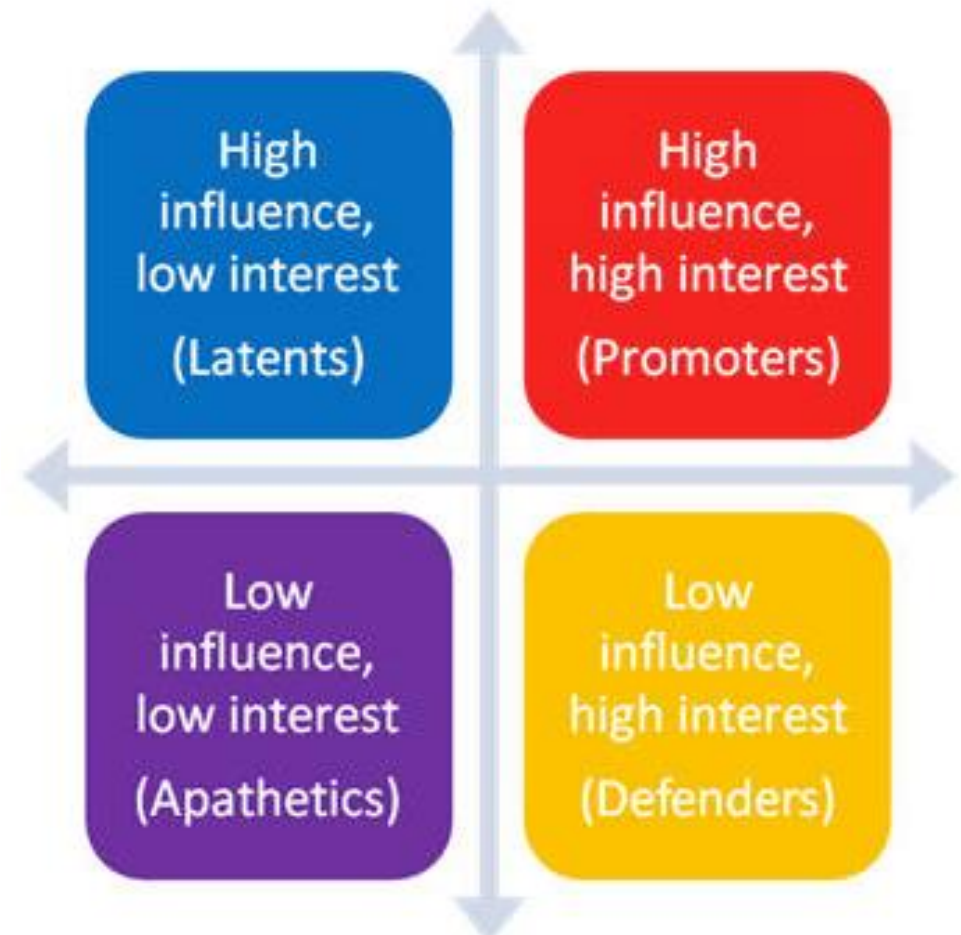

# Stakeholder analysis

Murdoch

A way of determining

- who can have the **most influence** on an effort
- who is likely to be **most affected** by the effort
- **how** you should work with stakeholders with different levels of interest and influence.

Source: <http://ctb.ku.edu/en/table-of-contents/participation/encouraging-involvement/identify-stakeholders/main>

# Users are people

**Murdoch**  
UNIVERSITY

## Insights

- Gender
- Age
- Geography
- Activities
- Interests
- Favorite Music
- Favorite TV Shows
- Favorite Movies
- Favorite Books

## Analytics

**Reach:**  
Total and Unique  
User Impressions  
and Clicks

**Viral Metrics:**  
Organic  
Distribution

**Engagement  
Metrics:**  
Interactions with  
your presence on  
Facebook. Ex: wall  
posts, discussion  
posts, photo  
uploads, etc

Source:

[http://i529.photobucket.com/albums/dd340/bets\\_carpenter/FacebookUserInformationAnalysis-1.jpg](http://i529.photobucket.com/albums/dd340/bets_carpenter/FacebookUserInformationAnalysis-1.jpg)

# HCI

Aims to improve the interactions between users and computers by making computers more usable and receptive to users' needs

A long term goal of HCI is to design systems that minimise the *barrier* between the human's idea of what they want to accomplish and the computer's support of the user's task

# HCI

Murdoch  
UNIVERSITY

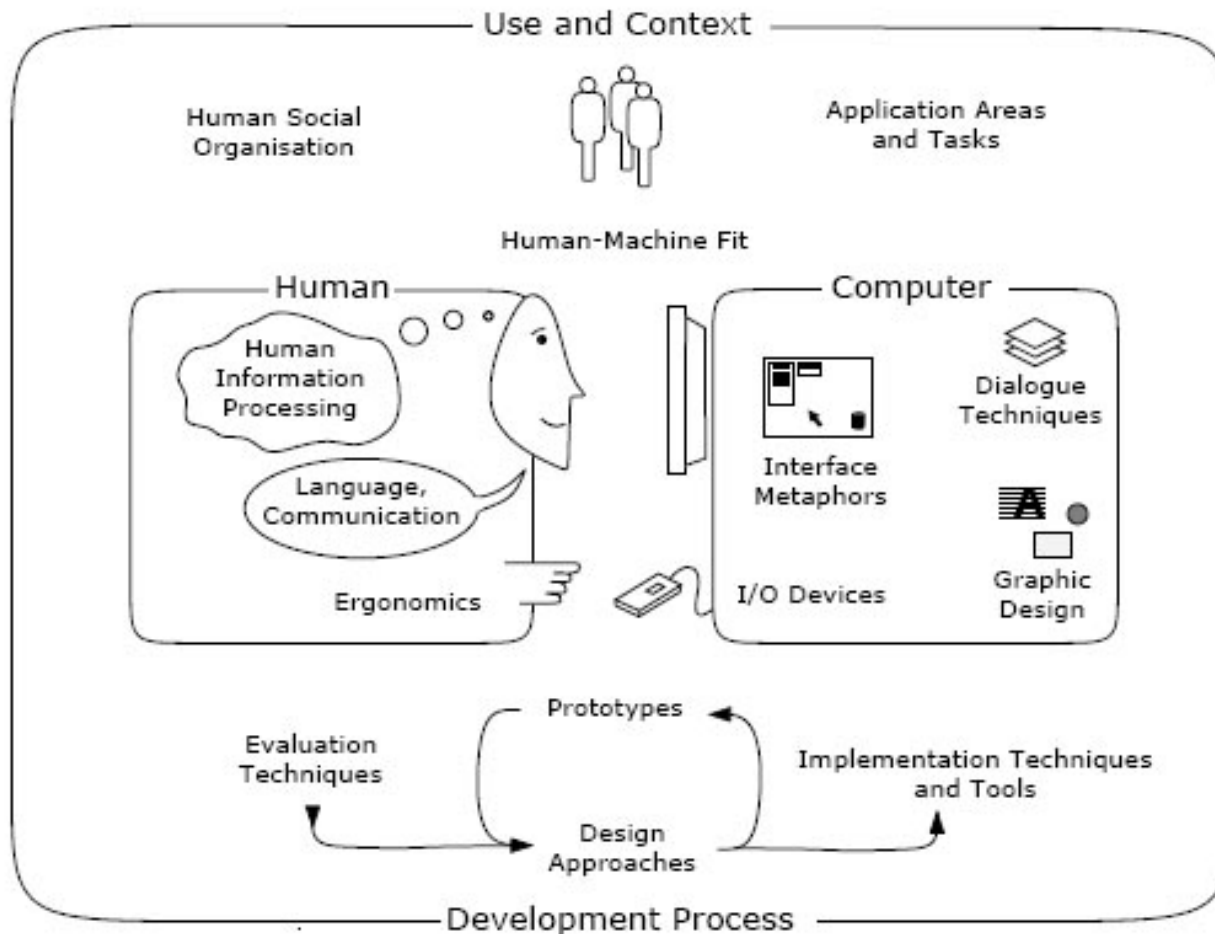

Figure 1.1: The nature of Human-Computer Interaction. Adapted from Figure 1 of the ACM SIGCHI Curricula for Human-Computer Interaction [Hewett et al., 2002]

Source: <http://hcik4.files.wordpress.com/2008/11/pic02.jpg>

# Usability

A *quality attribute* that assesses how easy user interfaces are to use:

- **Learnability:** How easy is it for users to accomplish basic tasks the first time they encounter the design
- **Efficiency:** Once users have learned the design, how quickly can they perform tasks
- **Memorability:** When users return to the design after a period of not using it, how easily can they re-establish proficiency
- **Errors:** How many errors do users make, how severe are these errors, and how easily can they recover from the errors
- **Satisfaction:** How pleasant is it to use the design

# Usability does matter

**Murdoch**  
UNIVERSITY

Source: <http://blog.openviewpartners.com/files/usability.jpg>

# Usability heuristics

Include:

- Match 'real world' & system
- Provide meaningful feedback
- Prevent errors, but also help users recover from them
- Support user control (eg undo)
- Be consistent
- Provide meaningful help & documentation
- Allow for novice & experts use
- Be minimalistic in design
- Allow users to recognise what they are trying to do, not recall/remember it

# Ten Usability Heuristics by Jakob Nielsen

## Visibility of system status

Give the users appropriate feedback about what is going on.

## Match between system and the real world

Use real-world words, concepts and conventions familiar to the users in a natural and logical order.

## User control and freedom

Support undo, redo and exit points to help users leave an unwanted state caused by mistakes.

## Error prevention

Prevent problems from occurring: eliminate error-prone conditions or check for them before users commit to the action.

## Aesthetic and minimalist design

Don't show irrelevant or rarely needed information since every extra element diminishes the relevance of the others.

## Consistency and standards

Follow platform conventions through consistent words, situations and actions.

## Flexibility and efficiency of use

Make the system efficient for different experience levels through shortcuts, advanced tools and frequent actions.

TEMPLATE OF TWO COLUMN PAGE WITH LOGO ON TOP AND SEARCH ON THE RIGHT, BIG PICTURES ON THE LEFT COLUMN FOLLOWED BY TEXT AND ICON ON THE RIGHT...

## Recognition rather than recall

Make objects, actions, and options visible at the appropriate time to minimize users' memory load and facilitate decisions.

## Help and documentation

Make necessary help and documentation easy to find and search, focused

## Help users recognize, diagnose, and recover from errors

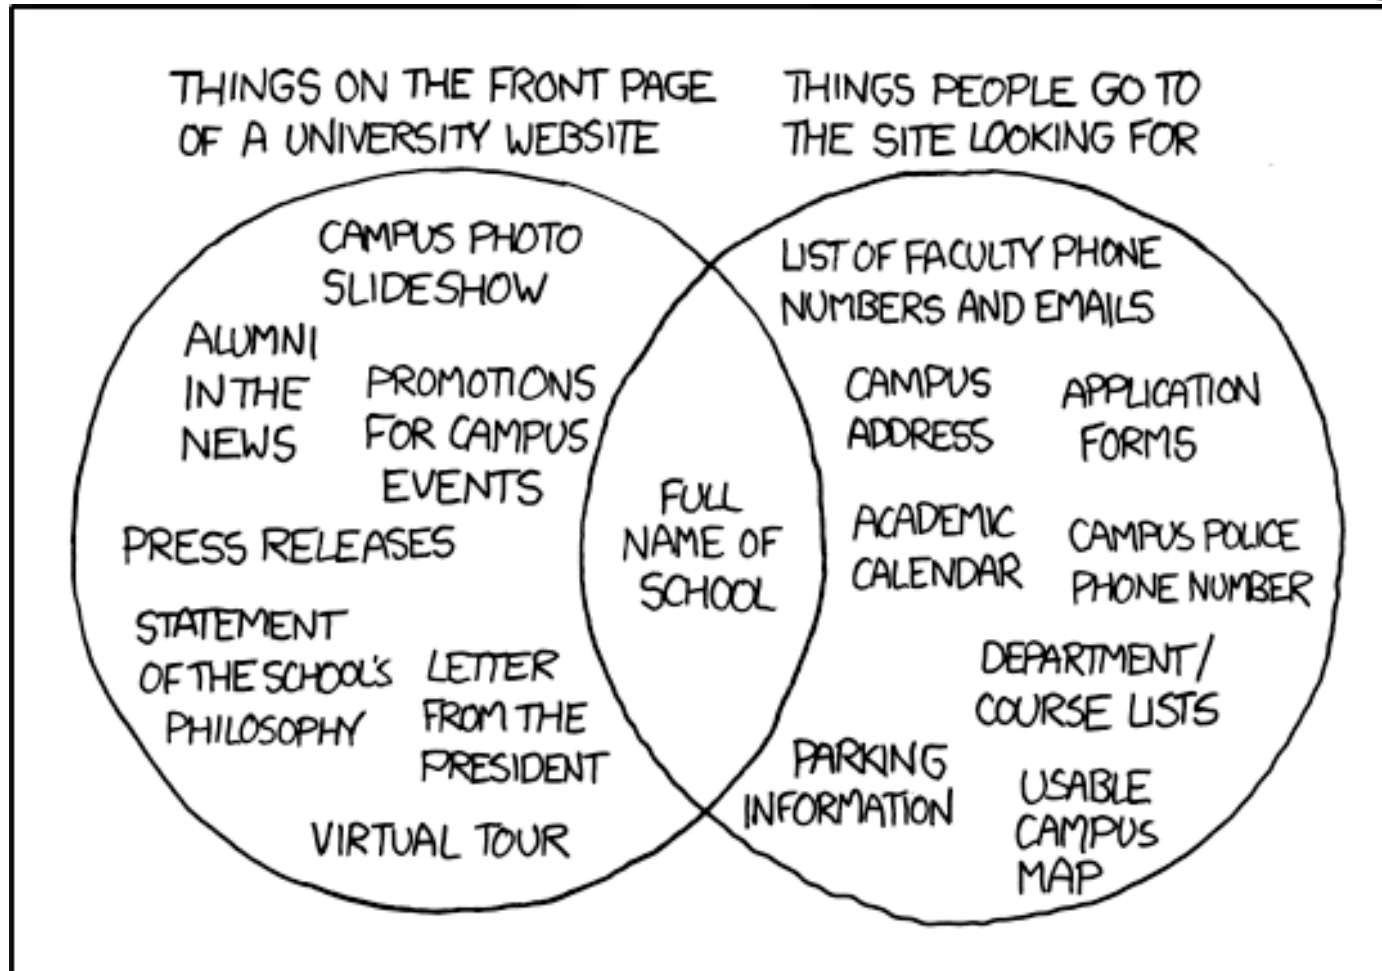

Express error messages in plain language (no codes) to indicate the problem and suggest solutions.

**Murdoch**  
UNIVERSITY

[http://25.media.tumblr.com/tumblr\\_mcoafptAPQ1rzteako1\\_1280.png](http://25.media.tumblr.com/tumblr_mcoafptAPQ1rzteako1_1280.png)

# Usability of a website

# Recap

Murdoch  
UNIVERSITY

*Information systems are designed for  
stakeholders and other users.*

*Usability is an attribute of information systems  
which have been designed with the users in  
mind.*

# 9.5 Globalisation/localisation

## 9.5.1 Why localise?

## 9.5.2 Issues to consider

# The global challenge

GENERAL CULTURAL FACTORS	SPECIFIC BUSINESS FACTORS
Global communication and transportation technologies	Global markets
Development of global culture	Global production and operations
Emergence of global social norms	Global coordination
Political stability	Global workforce
Global knowledge base	Global economies of scale

The growth of powerful communications technologies and the emergence of world cultures lay the groundwork for *global markets*—global consumers interested in consuming similar products that are culturally approved. Although the possibilities of globalisation for business success are significant, fundamental forces are operating to inhibit a global economy and to disrupt international business.

# Localising IS

## Issues to be considered:

- Translate :
  - the user interface, including menus and commands
  - all documentation and help
  - diagrams & examples
  - error messages
  - text in message boxes
- Redesign (?) labels in forms, reports etc
- Adjust for different character sets (eg \$ or €)
- Adjust for languages (eg that read/write right to left)
- Consider appropriateness of colours etc

# Recap

Murdoch  
UNIVERSITY

*Global information systems pose challenges*

*because cultural, political, and language*

*diversity magnifies differences in organisational*

*culture and business processes and encourages*

*proliferation of disparate local information*

*systems that are difficult to integrate.*

# Summary

Information systems may be both the cause and effect of organisational change.

The IS department supports organisational objectives by providing the IT skills necessary to:

- adapt to *changing* needs
- ensure systems acquired are *usable* and
- respond to *challenges* such as those offered by globalisation.
