Pseudo-code procedure definition:

- Any parameters means that output from other procedures are taken inside this procedure

```
Procedure [Data type] Method([Parameters])

…

Return

End Procedure
```

Declare an object

```
Create [variable] as new Object()
```

Calling an Object

```
Method([class variable],[Parameter])
```

Use methods

[class variable]	.nextLine()

```
Variable = NextLine([Class variable])
```

OR

[class variable]	.equals([class variable2])

```
Boolean isEqual = Equals([class variable], [class variable2])
```
